

## **CLAIMS**

**What is claimed is:**

**1. A sealing cover for the upper beam of blinds, comprising a blind, a sealing cover, and a decoration piece wherein the blind is made up of an upper beam, and a blind embodiment of a Venetian blind, a fabric drapery, a bamboo shade, a Roman blind, or a folding blind, etc. attached to the bottom of the upper beam thereof; both ends of the upper beam have a coupling hole defined thereon respectively to be engaged with a coupling section disposed at one side the sealing cover thereof; the present invention being characterized by that,**

**--the other side of the sealing cover having a dovetail fixing block protruding at the middle thereof, and a stop flange extending transversely at the bottom of the dovetail fixing block thereof;**

**--the decoration piece having a decoration article of various designs and styles attached at one side thereof, and a dovetail fixing groove defining the other side thereof to be engaged with the dovetail fixing block of the sealing cover;**

**--in assembly, the coupling section of the sealing cover is joined to the coupling hole of the upper beam in sleeve engagement and the dovetail fixing groove of the decoration piece led from the top to the bottom to be engaged with the dovetail fixing block of the sealing cover till abutted against the bottom stop flange thereof for secure location thereon; meanwhile, the decoration article thereof can be variously and easily changed in a do-it-yourself manner matching to the blind embodiment of different types, increasing the unique texture and the visual beauty of the blinds in display as well as boosting the competitive power of the blinds thereof in the market.**

**2. The sealing cover for the upper beam of blinds as claimed in Claim I wherein the fixing block of the sealing cover can be dovetailed in shape.**

- 3. The sealing cover for the upper beam of blinds as claimed in Claim I wherein the fixing groove of the decoration piece thereof can be dovetailed in shape matching to the dovetail fixing block of the sealing cover for secure engagement thereof.**
- 4. The sealing cover for the upper beam of blinds as claimed in Claim I wherein both the sealing cover and the decoration piece thereof are integrally molded.**
- 5. The sealing cover for the upper beam of blinds as claimed in Claim I wherein one side of the sealing cover can also be provided with a plane abutting facet having a fixing hole disposed at the center thereof communicating with the hollow coupling section of the sealing cover thereof, and one side of the decoration piece can also has a fixing block with a plane fixing facet and a screw hole disposed thereon to be abutted against the plane abutting facet of the sealing cover and located thereto via a screw led through the fixing hole from the hollow coupling section thereof and securely joined to the screw hole of the fixing block thereof; the coupling section of the sealing cover is then adapted to the coupling hole of the upper beam and securely located thereto in sleeve engagement.**
